FALL LIST OF BULBS, 1920

C. C. MORSE & CO., Seedsmen, San Francisco, California

Morse's Bulbs are selected from one of the best and most reliable growers in all Holland.

Our importations are of extra strong bulbs and are recognized by the most critical gardeners as way superior to the ordinary run of Holland Bulbs.

This price list takes the place this year of our usual Fall catalogue. Bulb prices are not postpaid unless so stated, but the weights are given so the postage can be easily figured. Add the correct postage to your remittance at Zone Rates.

Non-Warranty—Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control, such as unfavorable weather, too deep and too shallow planting, slugs, etc., therefore C. C. Morse & Co. give no warranty, express or implied, as to description, purity, productiveness, or any other matter of any seeds, plants, bulbs, etc., they send out, and will be in no way responsible for the crop; if the purchaser does not accept the goods on these terms they are to be returned to us at once.

We wish to remind you of the few usual requests which help us so much in our business:

Please write your order plainly, giving street address or Rural Box Number and full address. Order early, for bulbs should be planted at their proper season.

Cultural Directions: Outdoor planting should be done early in the fall to secure healthy plants, vigorous foliage and beautiful flowers, bulbs so that there is earth above them to their own depth. This is a good rule. Do not overcrowd, 3 to 4 inches apart for small bulbs, such as etc., 6-7 inches for Junquiis, Tulips, Iris, Freesias; 7-9 inches for Hyacinths and Narcissus; 18 to 27 inches for Lilies and Agapanthus.

DAFFODILS

Before the winter has passed these wonderful flowers give their cheerful appearance to all beholders. They may be planted along the sidewalk and perhaps even neglected, but no matter—the Daffodils come with the Spring. In clumps under trees they show a mass of bright color.

Plant Daffodis in October and November out in the open ground in good soil and let them remain undisturbed. After flowering, let the leaves die back, but do not cut them off or the bulb will not flower next year. Set 5 inches deep and 8 inches to 12 inches apart. The bulbous roots will multiply and send up fine long flower stems every spring. Be sure to keep the ground moist during the growing season if season is dry. They can also be grown easily in pots, putting four or five bulbs into a 5-inch pot, and keep watered.
